

## OFFICE STAFF TRAINING PROGRAMS

PLICO offers office staff training programs designed to educate your employees in risk management principles and strategies. These one-hour sessions provide meaningful information regarding basic processes and behaviors that can impact the quality, efficiency and safety of your office environment.

Physicians are welcome but not required to attend. In order for insured providers to earn applicable Risk Management premium credit, ALL ancillary staff, including advanced practice providers, must be in attendance.

# Please call 405.815.4803 to schedule training.

## Risk Management: It's a Team Effort

Physicians leave much of the day-to-day operations of their practice to the office manager and other staff. All members of the healthcare team must be aware of the basic principles of risk management and how to put them into practice. This presentation stresses the importance of good communication with patients, including education regarding levels of health literacy, written communications and the importance of patient-centered care through adequate informed-consent practices. We will discuss the Oklahoma and Federal law on maintenance, release, and storage of medical records. The importance of written policies and procedures is emphasized, and guidelines for writing policies and procedures are provided—including the recommended issues that should be addressed in those policies and procedures.

#### Mission: Exceptional

Your mission, should you choose to accept it...Low patient scores can hurt your reputation and your bottom line. Patient experience has grown in importance and is a key performance indicator for healthcare providers. On a daily basis people arrive for care with providers, and they are no longer just patients, but sophisticated and savvy consumers. Providing exemplary care is no longer enough to engage patients.

We must make that human connection and accept the mission to create "The Exceptional Experience." The numerous benefits of providing the exceptional experience include: patient retention, loyalty, growth, trust, service recovery and risk mitigation. Join us as we look at the relationship between quality, service and the exceptional experience. Develop a new perspective on the difference between delivering an experience vs. just providing customer service. Gain insight into "exceptional" as we study the top experts in the fields of delivering quality exceptional experiences.

### Managing Diagnostic Test Results, Consults and Referrals

Mismanaged lab results, consults and referrals are often cited as the cause of serious diagnostic errors and resulting injuries to patients. Physicians and office staff need to be familiar with the risks caused by mishandled results. Information will be given regarding the widespread nature of the problem, and strategies will be presented to decrease the potential errors in the management of test results, consults, and referrals. Listeners will be informed of resources available to improve the management of their processes. Case studies are discussed throughout in order to emphasize the importance of the problem.

# The Challenging Patient Encounter: Strategies for Management

Managing the difficult patient encounter can be a challenge to the healthcare provider and staff. While it is common for providers to see a handful of patients who evoke feelings of dread, frustration and even anger, not all difficult encounters can be strictly attributed to the patient's side of the interaction. This presentation will discuss situational issues (i.e., health literacy, language or cultural differences), patient characteristics, and physician/ staff attitudes that may contribute to the likelihood of a challenging exchange. Preventative measures, communication interventions and techniques and discussion of escalation warning signs will

be presented. In conclusion, the necessity for staff safety plans and situational drills will be discussed.

#### Social Media DOs and DON'Ts

While the advent of social media brings a unique set of risks to the physician office, it can also be used in a positive and productive way to communicate effectively with patients and their families. If used inappropriately, this communication medium may unknowingly share confidential information or even destroy one's personal or professional "brand" with a broad population. One must also consider the idea that "deleting" posts, texts or other information in the cyber world is essentially impossible. In the discussion, we will highlight the need to maintain patient confidentiality and adhere to patient rights and ethical practices. Issues to be presented include the permanency of social media, the need for professional behavior in posts, dealing with patient reviews, and colleagues who post inappropriate information. Additionally, we will explore the potential benefits of utilizing Facebook, Twitter and other platforms to successfully implement a social media presence.

### Emergency Preparedness: Medical, Weather, and Violence

Oftentimes physician offices are not sufficiently prepared for situations such as patients presenting with sudden emergent conditions, severe weather, fire, violence or other catastrophic events. The most effective strategies for managing emergencies within the physician practice are prevention and preparedness. Utilizing an Office Risk Profile, closer inspection of the office can identify areas for improvement such as equipment, medication, supplies and training. The program discusses the importance of completing an office risk profile and discussion of resources available to assist with an emergency program including protocol development and implementation. Additionally, the importance of emergency drills and identifying potentially violent behaviors will be discussed.
